EB09943 - Goat Anti-CETP Antibody

Size: 100µg specific antibody in 200µl

Target Protein

Principal Names: cholesteryl ester transfer protein, plasma, HDLCQ10, lipid transfer

protein, CETP

Official Symbol: CETP

Accession Number(s): NP_000069.2

Human GeneID(s): 1071

Immunogen

Peptide with sequence GNAHACSKGTSHEA, from the N Terminus of the protein sequence according to NP_000069.2.

Please note the peptide is available for sale.

Purification and Storage

Purified from goat serum by ammonium sulphate precipitation followed by antigen affinity chromatography using the immunizing peptide.

Supplied at 0.5 mg/ml in Tris saline, 0.02% sodium azide, pH7.3 with 0.5% bovine serum albumin

Aliquot and store at -20°C. Minimize freezing and thawing.

Applications Tested

Peptide ELISA: antibody detection limit dilution 1:64000.

Western blot: Preliminary experiments gave bands at approx 48kDa and 28kDa in HepG2 lysates after 1µg/ml antibody staining. Please note that currently we cannot find an explanation in the literature for the bands we observe given the calculated size of 54.8kDa according to NP_000069.2. Both detected bands were successfully blocked by incubation with the immunizing peptide (and BLAST results with the immunizing peptide sequence did not identify any other proteins to explain the additional bands). We would appreciate any feedback from people in the field - have any results been reported with other antibodies/lysates? Have any further splice variants/modified forms been reported?

Species Reactivity

Tested:

Expected from sequence similarity: Human
