EB09145 - Goat Anti-NY-ESO-1 Antibody

Size: 100µg specific antibody in 200µl

Target Protein

Principal Names: CTAG1B, cancer/testis antigen 1B, CTAG, CTAG1, ESO1, LAGE-2, LAGE2B, NY-ESO-1, New York esophageal squamous cell carcinoma 1, cancer antigen 3

Official Symbol: CTAG1B

Accession Number(s): NP_001318.1

Human GeneID(s): 1485

Immunogen

Peptide with sequence C-AELARRSLAQDAP, from the internal region of the protein sequence according to NP_001318.1.

Please note the peptide is available for sale.

Purification and Storage

Purified from goat serum by ammonium sulphate precipitation followed by antigen affinity chromatography using the immunizing peptide.

Supplied at 0.5 mg/ml in Tris saline, 0.02% sodium azide, pH7.3 with 0.5% bovine serum albumin.

Aliquot and store at -20°C. Minimize freezing and thawing.

Applications Tested

Peptide ELISA: antibody detection limit dilution 1:16000.

Western blot: Preliminary experiments gave an approx. 28kDa band in Human Testis lysates after $0.3~\mu g/ml$ antibody staining. Please note that currently we cannot find an explanation in the literature for the band we observe given the calculated size of 18.0kDa according to $NP_001318.1$. The 28kDa band was successfully blocked by incubation with the immunizing peptide. We would appreciate any feedback from people in the field - have any results been reported with other antibodies/lysates? Have any further splice variants/modified forms been reported?

This product has been successfully used in Microarray as described in a scientific publication (PMID: 22922091).

Species Reactivity

Tested:

Expected from sequence similarity: Human
