EB07385 - Goat Anti-SYNGAP1 Antibody

Size: 100µg specific antibody in 200µl

Target Protein

Principal Names: SYNGAP1, synaptic Ras GTPase activating protein 1 homolog (rat), RP11-175A4.1, DKFZp761G1421, KIAA1938, RASA1, RASA5, SYNGAP, OTTHUMP00000064825, synaptic Ras GTPase activating protein 1, synaptic Ras GTPase activating protein 1 (homolog of rat), synaptic Ras GTPase activating protein, 135kDa

Official Symbol: SYNGAP1

Accession Number(s): NP_006763.1

Human GeneID(s): [8831](#)

Non-Human GeneID(s): 240057 (mouse), 192117 (rat)

Immunogen

Peptide with sequence C-YRSDSKKRKKDKAGY, from the internal region of the protein sequence according to NP_006763.1.

Purification and Storage

Purified from goat serum by ammonium sulphate precipitation followed by antigen affinity chromatography using the immunizing peptide.

Supplied at 0.5 mg/ml in Tris saline, 0.02% sodium azide, pH7.3 with 0.5% bovine serum albumin.

Aliquot and store at -20°C. Minimize freezing and thawing.

Applications Tested

Peptide ELISA: antibody detection limit dilution 1:32000.

Western blot: Preliminary experiments gave an approx 38-40kDa band in Human, Mouse and Rat Brain lysates after 0.3µg/ml antibody staining. Please note that currently we cannot find an explanation in the literature for the band we observe given the calculated size of 147kDa according to NP_006763.1. The 38-40kDa band was successfully blocked by incubation with the immunizing peptide. We would appreciate any feedback from people in the field - have any results been reported with other antibodies/lysates? Have any further splice variants/modified forms been reported?

Species Reactivity

Tested:

Expected from sequence similarity: Human, Mouse, Rat, Dog
